## Ledger Nano S

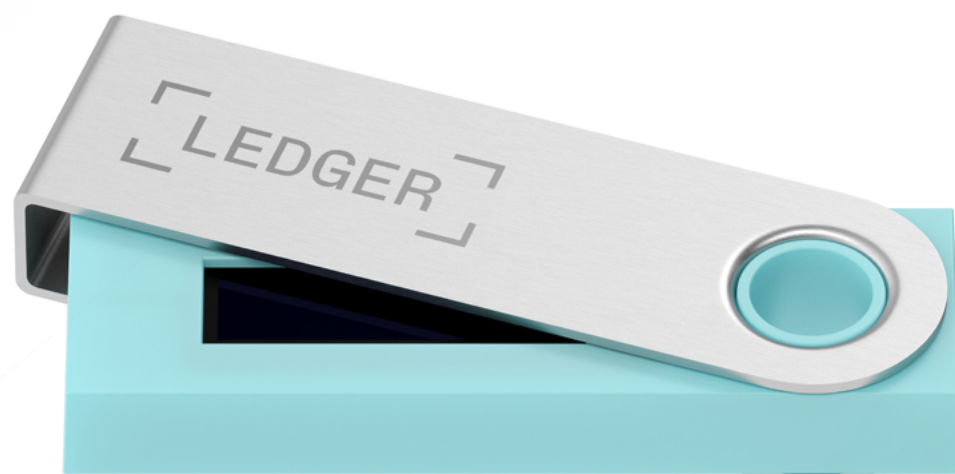

- Ledger Nano S is the original hardware wallet for your crypto assets Bitcoin, Ethereum, Litecoin and other alternative crypto assets based on robust security features to store cryptographic data and secure digital payments
- wallet connects to any computer (Windows 7+; Mac 10.8+; Linux or Chrome OS) using USB
- an integrated OLED display for double checking of individual transactions
- a confidential data are never exposed: the middle Ledger Nano S is strictly isolated and locked with a PIN code
- safety features: Ledger Nano S is based on two-chip architecture (ST31 / STM32, certification level: CC EAL5 +). The firmware integrity is guaranteed by cryptographic authentication
- privacy: your private keys are never kept or known by Ledger or a third party: they are blocked by security features
- your hardware wallet remains decentralized: you are your own bank
- possibility to use accompanying applications such as cryptocurrency wallets, FIDO®, U2F, GPG, SSH or your own application
- Ledger Nano S supports FIDO® Universal Second Factor authentication standard on Google, Dropbox, GitHub or Dashlane
- accounts are backed up to recovery list: easy recovery on any Ledger device or compatible wallet (BIP39 / BIP44)
- malware proof: initialization and configuration restoration is done in a secure Ledger Nano S environment. Your cryptographic secret is never exposed to the outside world

Supported cryptocurrencies:
